IRPC'S UHV PROJECT KICKS OFF

IRPC said last Friday that its upstream project for hygiene and value-added products or UHV project commenced commercial operations on July 16.

Sales were realised starting from that date, it said in a filing to the Stock Exchange of Thailand.

The UHV project upgrades the low value product, fuel oil, to high valued-added products.

The main product is 320,000 tonnes of propylene per year, which will be the feedstock for the polypropylene expansion unit.
